

MICRO BANDBOARD RING PLACEMENT

Shown are the included o-rings and recommended placement. Drawings of o-rings are actual size to enable proper identification. Simply place the rings on the drawings to determine the identity of the ring. In general, the stiffer rings (A70) are used for the operational parts (bumper, clip, and clip nose). The softer rings (A50) are used for securing items to the wing, and paper or other items to the board itself.
